An Autonomous Multi-Agent System for Real-Time Flood Response in Bangladesh *Final Year Thesis · 2026*

Python, Multi-Agent Architecture, Redis Pub/Sub, SAR Imagery, Google Earth Engine, NLP, MongoDB

- Built a four-agent AI system (Environmental, Distress Intelligence, Resource Management, Dispatch Optimization) that autonomously chains real-time flood detection, community distress identification, resource allocation, and safe route dispatch within seconds — without any human coordination at handoff points.

Heart2Blood — Emergency Blood Donation System

Oracle APEX, SQL, PL/SQL

- Developed a web platform on Oracle APEX that connects blood recipients with nearby donors in emergencies via blood type and location-based search with real-time notifications.

Smart Energy Monitoring System

Python, Tuya IoT API, MongoDB, Data Analysis

- Built a modular Python system integrating Tuya smart power devices to collect real-time energy readings, analyze usage patterns, and estimate electricity billing with optional MongoDB storage.
